

Con Trau Eco

We build, operate and transfer traceable food supply chains in Vietnam, funded by buyer pre-payments and repaid in product, not cash

Team

Sangdon JOO | Founder & CEO

- B.Eng. Naval Architecture and Marine Engineering, Seoul National University
- 20-year serial entrepreneur
- \$16.7M raised across ventures

Nguyen Van Cu | Microalgae Lead

- 16+ years of experience in food and bioprocess manufacturing
- Scaled ponds 2→20

Seeking Opportunities

- **Distribution partners for fresh soft-shell crab and lobster**
- **Blended finance —equity plus debt— from impact or infrastructure investors for food supply-chain development where an off-taker is already committed**

Problem

- Climate volatility and geopolitical risks make clean, traceable food inputs scarce and hard to source at scale through spot markets
- Fresh seafood is even harder. Origin, air logistics and cold chain must align, and few suppliers own all three

Solution

- We build and run production in Vietnam, then hand the buyer a fully operating, traceable supply line, funded by product-repaid pre-payments, so they own a dedicated source
- Four lines run on one model: spirulina, shrimp, black soldier fly (BSF) protein; and a fresh crab and lobster line in development

Key Features

- Spirulina operating with revenue: up to 300t/year by end-2026, scaling toward 600t/year in 2027 at EU-standard quality
- Shrimp expanding to a 25 ha. Khanh Hoa site
- BSF protein exporting to Korea from 2026
- Domestic offtake from October
- Fresh crab and lobster in development

Business Model

- Buyers fund CapEx and are repaid in product; a multi-year off-take contract locks in demand and price.
- We operate the facility and ship a contracted volume under fixed supply terms.
- The model replicates line by line, site by site.

Business Snapshot

- Revenue(234K in 2025) already generated, with stable, continuous production
- Spirulina in production in Trà Vinh; second site in Ninh Thuận building out
- Shrimp operating in Cà Mau; BSF protein exporting from 2026

Target Audience

- Fresh-seafood importers and distributors in Singapore and Southeast Asia
- Food, beverage and nutrition companies and natural-colour / functional-ingredient buyers needing a traceable, self-controlled source
