Team

Young-jun KIM | CEO

- Leads HAIMDALL’s product strategy, AI safety architecture, and global commercialization
- Former product and B2B strategy manager for gram (laptop brand) at LG Electronics

Seeking Opportunities

- Enterprise and public-sector pilot projects
- Global distribution, system integration, and investment partners

Problem

- Industrial safety data is scattered across work plans, risk assessments, incident records, near-miss reports, and field systems
- Because these signals are reviewed separately, recurring hazards, missing controls, and emerging risks often remain hidden until an accident occurs

Solution

- **HAIMDALL** connects fragmented safety data through an industrial safety ontology. It compares current operations with regulations, company rules, past incidents, near misses, risk assessments, and location data to identify risks and recommend preventive actions

Key Features

- AI Infrastructure for continuous, preventative risk management before accidents occur, including:
 - Ontology-driven safety data standardization
 - Dynamic Risk Mapping (DRM)
 - Time-series risk accumulation analysis
 - Continuous AI-powered risk detection and prediction

Business Model

- Enterprise SaaS, private-cloud, and on-premise deployment
- Recurring revenue through AI analysis, system integration, and site expansion

Business Snapshot

- Annual revenue of KRW 6.58B (USD 4.6M); Series B fundraising target of USD 3.6M (pre-valuation USD 21.5M); 50,000 active users
- Winner, WSHAsia Awards – Technology Category
- Selected as one of the Top 80 solutions in the NVIDIA Inception Grand Challenge
- Korea’s only KOSHA-certified smart industrial safety solution
- Selected as the 2026 Next Unicorn Candidate Company by the Ministry of SMEs & Startups of Korea
- Expanding enterprise pilots and global commercialization

Target Audience

- Manufacturing, construction, energy, logistics, and public infrastructure
- Enterprises operating complex or high-risk industrial sites
